Function:

A, Description: receptor mediating effects of fibroblast growth factor

A, Note: expressed in normal lung; expressed in some carcinomas

C, Superfamily: basic fibroblast growth factor receptor 1; immunoglobulin homology; protes)

C, Superfamily: basic fibroblast growth factor receptor 1; immunoglobulin homology; protes)

C, Keywords: ATP; autophosphorylation; duplication; glycoprotein; growth factor receptor;

F, 12-40 Domain: signal sequence #status predicted <SIG.

F, 25-369 Domain: stracellular #status predicted <EXT.

F, 50-103 Domain: immunoglobulin homology <IM3.

F, 165-226 Domain: immunoglobulin homology <IM3.

F, 165-226 Domain: immunoglobulin homology <IM3.

F, 167-390 Domain: intracellular #status predicted <INT.

F, 191-802 Domain: intracellular #status predicted <INT.

F, 465-750 Domain: protein kinase homology <XIN.

F, 465-750 Domain: protein kinase ATP-binding motif
F, 57-101, 172-224, 271-333 Disulfide bonds: #status predicted
F, 503, 520, 612 Active site: Lys, Glu, Asp #status predicted
F, 630, 520, 612 Active site: Lys, Glu, Asp #status predicted
F, 630, 101 ding site: magnesium (Asn, Asp) #status predicted
F, 6417 Binding site: phosphate (Tyr) (covalent) (by autophosphorylation) #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 fibroblast growth factor receptor 3 precursor - human N;Contains: protein-tyrosine kinase (EC 2.7.1.112)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    97 Nighternate names: basic fibroblast growth factor receptor

Nicontains: protein-tyrosine kinase (EC 2.7.1.112) flg

Cipacies: Mus musculus (house mouse)

Cipace: 31-Dec-1993 #text change 09-Jul-2004

Cipace: 31-Dec-1993 #sequence revision 31-Dec-1993 #text change 09-Jul-2004

A;Residues: 1-30,120-822 are seperences: GB:M28998; NID:g192164; PIDN:AAA37290.1; PID:g309116

A;Residues: 1-30,120-822 are seperences: GB:M28998

A;Molecule type: mRNA

A;Residues: 1-30,120-82

A;Residues: 1-30,120-8398

A;Note: the shorter form is expressed at higher levels in neuronal cells at early stages

A;Note: the shorter form is expressed at receptor for fibroblast growth factor.

The envelope consists of two proteins: protein M and glycoprotein E. The nucleocapsid is a complex of protein C and mRNA. In immature particles, there are 60 icosaedrally organized trimmeric spikes on the surface. Each spike consists of three heterodimers of envelope protein M precursor (prM) and envelope protein E (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        flaviviruses.";
Virology 188:875-880(1992).

-!- FUNCTION: The small proteins NS2A, NS4A and NS4B are hydrophobic, successful a possible membrane-related function. NS5 may play a role in the viral RNA replication. NS3 and NS2B form a protease which processes the viral polyprotein into separate proteins.

-!- CATALYTIC ACTIVITY: Selective hydrolysis of Xaa-Xaa-|-Xbb bonds is which each of the Xaa can be either Arg or Lys and Xbb can be either Ser or Ala.
                                                                                                                                                                                                                                                                                                                                                                Gaps

Squence and analysis of chromosome 4 of the plant Arabidopsis root hair growth. -!- SIMILARITY: Belongs to the HAK/KUP transporter (TC 2.A.72) family. -!- CAUTION: Ref. 2 sequences differ from that shown due to erroneous leaves and flowers of mature plants.
-!- DEVELOPMENTAL STAGE: Highly expressed in roots in the early stage of seedlings growth. Sze H., -i-FUNCTION: High-affinity potassium transporter required for tip growth of root hairs.
-i-SUBCELLULAR LOCATION: Integral membrane protein. Plasma membrane Quintero F.J., Blatt M.R.; $^{\prime}$ "A new family of K+ transporters from Arabidopsis that are conserved STRAIN-cv. Columbia; MEDLINE=98010480; PubMed=9350997; DOI=10.1016/S0014-5793(97)01125-3; -!- TISSUE SPECIFICITY: Detected at very low levels in roots, stems, Maeser P., Thomine S., Schroeder J.I., Ward J.M., Hirschi K., Sze Talke I.N., Amtmann A., Maathuis F.J.M., Sanders D., Harper J.F., Tchieu J., Gribskov M., Persans M.W., Salt D.E., Kim S.A., "Phylogenetic relationships within cation transporter families of Kim E.J., Kwak J.M., Uozumi N., Schroeder J.I.; "AtKUP1: an Arabidopsis gene encoding high-affinity potassium GENE FAMILY, AND NOMENCLATURE.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           -1- CATALYTIC ACTIVITY: 2-deoxy-D-ribose 5-phosphate = D-glyceraldehyde 3-phosphate + acetaldehyde.
-1- PATHWAY: Nucleotide and deoxyribonucleotide catabolism.
-1- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
-1- SIMILARITY: Belongs to the deoC/fbaB aldolase family. DeoC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Mycoplasma genitalium.

-!- CATALYTIC ACTIVITY: 2-deoxy-D-ribose 5-phosphate = D-
glyceraldehyde 3-phosphate + acetaldehyde.
-!- PATHWAY: Nucleotide and deoxyribonucleotide catabolism.
-!- SUBCELDULAR DOCATION: Cytoplasmic (By similarity).
-!- SIMILARITY: Belongs to the deoC/fbaB aldolase family. DeoC
